discontinuities and several serious interpretation problems.1) The Ninth Revision made further modifications in the classification lists and again created a need for comparability ratios for some causes of death when comparisons are made using 1981 data. In comparison studies, the following should be noted:

For Diseases of the Heart, the 9th Revision does not include all diseases of the circulatory system as did the 8th.

For Cerebrovascular Disease, the diseases include in the 9th are basically the same as those for the 8th. It should be noted that terminology changed from the 7th to the 8th. Under the 7th Revision, it was called Vascular Lesions Affecting the Central Nervous System and was listed under Diseases of the Nervous and Sense Organs. For the 8th and 9th Revision, these diseases are listed under Diseases of the Circulatory System.

For conditions originating in the perinatal period, the 9th Revision has been completely restructured to provide for current medical ideas on these conditions as much progress has been made in recent years. The 9th Revision provides much greater specificity.

For major changes between the 7th and 8th Revision, please refer to Wisconsin Public Health Statistic, 1978.

Small Frequencies

The numbers of births or deaths reported for a community represent complete counts of these events. As such, they are not subject to sampling error or variation, although they are subject to errors in the collection and processing procedures. However, when the figures are used for comparison of frequencies and rates over a time period or for different areas, the number of events that actually occurred may be considered as one of a large series of possible results that could have arisen under the same circumstances. The probable range of values may be estimated from the actual figures according to certain statistical assumptions (Vital Statistics for the U.S., Vol. 1, 1959, p. 1-20).

NOTE TO USER

Separate Part I books were published earlier for 1981 and 1982 data years. That was made possible by computarization of the tables that contained only data from the Wisconsin Vital Records files.

All tables dependent on population estimates, either as such (Tables 1, 2, 3, 4, 5, 6) or as the denominators for rates (Tables 7, 8, 9, for instance) were delayed for availability of national data used in the estimation model.

This volume is combined Part 2 for 1981 and 1982. No tables published in Part 1 are repeated here; they are noted in the 1982 Table of Contents. Historical narrative is included in the 1982 section only. Historical tables all of whose 1981 data are in the 1982 versions are omitted from the 1981 section.

Supplemental tables, published in neither part for either year, are available as indicated in the 1982 Table of Contents.

We hope to recombine our parts for data year 1983.

County population estimates in this table and in table 3 were independently made and thus differ slightly one from another. These estimates were ratio-adjusted to the USBOC state estimate 4,735,000, before rounding. The state and counties were then independently rounded respectively to thousands and to hundreds. Therefore, the sum of the counties may not exactly equal the state total.
